*New Versa USB22D connects any computer to a Dante network with no software installation and can be used with any audio application for playback or capture, making it ideal for conference rooms, classrooms, and lecture halls.*

SALT LAKE CITY, UTAH, October 25, 2023 —ClearOne (NASDAQ: CLRO), a global market leader in conferencing, collaboration, and network streaming solutions, is providing integration partners and end user customers with added flexibility in system connectivity with the introduction of its new Versa® USB22D Dante® adapter. The adapter will be showcased at InfoComm India 2023 in Mumbai from October 25-27, 2023 at Booth E30.

Enabling users to directly connect any computer to a Dante network without first requiring software installation, the new Versa USB22D adapter can be used with any audio application for playback or capture and is thus ideal for a wide range of small to mid-sized meeting spaces including executive offices, conference rooms, classrooms and lecture halls for Bring Your Own Meeting (BYOM) audio and video conferencing and in-room presentations.

ClearOne's Versa® USB22D Dante® USB Adapter enables computers to connect to Dante networks seamlessly, offering compatibility with any chosen audio applications for both playback and capture in any room.

"Fast, flexible and reliable connectivity is more important than ever before in today's media centric world of presentations," ClearOne CEO Derek Graham stressed today. "The new Versa USB22D adapter makes it easier than ever for our partners to serve their customers with a solution that enables direct connectivity of their computers with any Dante enabled network."

The Versa USB22D adapter supports two input and two output channels of audio, allowing PCs and mobile devices to play and capture audio with Dante-enabled devices over a standard IP network. Users can automatically discover and configure the new product using Audinate® Dante® Controller software.

Featuring built-in support for Dante Audio over IP and AES67 RTP transport formats, the adapter also includes cables to connect to a USB C host port and a USB Type A host port. Power with the USB port on a computer or with a PoE (Power over Ethernet) switch—a separate power supply is not needed.

The USB22D delivers bit-perfect audio reproduction, super-low latency, and sample-accurate synchronization across the entire Dante network. What's more, the Dante Domain Manager ready adapter works seamlessly with Dante-enabled devices including ClearOne DSP mixers, Wireless Microphones, and Beamforming Microphones. It connects any computer to the ClearOne BMA 360D through a Dante® network.
