ClearOne to Showcase New Audio Conferencing Solutions at VoiceCon in San Francisco

Personal and tabletop conferencing products will be shown in ClearOne's booth #515 at the Moscone Center.

SALT LAKE CITY, Oct. 27 /PRNewswire-FirstCall/ -- ClearOne (<http://www.clearone.com>) (Nasdaq: CLRO), the leading global provider of high performance audio conferencing solutions, will be showcasing new conferencing solutions at the upcoming VoiceCon conference and exhibition, November 3rd and 4th at the Moscone Center in San Francisco, California.

VoiceCon brings corporate communications decision makers together with the industry's vendors, analysts and consultants to focus on the issues central to enterprise networks and communications. VoiceCon San Francisco 2009 will focus on the ongoing evolution in enterprise communications to IP Telephony and Unified Communications systems, software and services. Reflecting the growing complementary relationship between communications and business applications, TechWeb's Enterprise 2.0 San Francisco will be collocated with VoiceCon. Enterprise 2.0 is the leading event for companies looking to transform their business through social computing and the adoption of Web 2.0 tools and technologies.

Along with their entire line of conferencing systems and speakerphones, ClearOne will be showing new products from their [Personal Conferencing](#) product line, including the [CHAT 60](#), [CHAT 160](#), [CHAT 70](#), and [CHAT 170](#). The CHAT 70 and CHAT 170 are new speakerphones specifically optimized for use with Microsoft Office Communications Server 2007. The CHAT 60 and CHAT 160 are brand new speakerphones that are certified for use with Skype. These new speakerphones join the [CHAT 50](#) and [CHAT 150](#) and easily connect via USB to laptops or PCs for natural, hands-free audio communication, without the need to be tethered to the PC by a headset. These award-winning speakerphones deliver full-duplex capability for crystal-clear communications and are the perfect addition to the office or home office, providing convenient, high-quality audio.

ClearOne will also be showing their Tabletop Conferencing products, including the MAX IP, the industry's first fully expandable room conferencing system. MAX IP is SIP-based and users can daisy-chain up to four phones together for unrivaled room coverage, flexibility and control. ClearOne also has analog versions of the MAX conference phones, both wired and wireless. All of ClearOne's conferencing products contain [HDConference™](#), the suite of high-performance audio technologies ClearOne created for its market-leading professional conferencing systems.

"After almost 20 years, VoiceCon has emerged as one of the premier IP telephony events," said Mark Child, Director of Product Marketing - Telephony, at ClearOne. "Users from across all industries come to VoiceCon to learn about those products and applications that are leading the evolution in enterprise communications. ClearOne's audio and collaboration solutions are a natural fit for those organizations that are looking for ways to increase productivity and reduce expenses."
