## **UNITE PTZ Camera with USB 3.0 and DVI Interface Now Available through ClearOne Distributors and Resellers**

**Versatile and economical professional-grade camera is compatible with all popular video collaboration, UC, and multimedia streaming applications**

SALT LAKE CITY, Dec. 9, 2014 /PRNewswire/ -- ClearOne (NASDAQ: CLRO), has released its new UNITE™ PTZ Camera, an affordable, professional-grade, high-resolution 1080p60 camera that can connect directly to any standard PC or laptop through USB 3.0, eliminating the need for adapters or converters. The camera can also connect to traditional video devices through its built-in DVI interface.

The UNITE PTZ Camera transforms any meeting room into a professional video collaboration environment. It offers an outstanding, high-performance value compared to other, more expensive solutions on the market. Full-HD video in resolutions up to 1080p60 ensures that remote sites can accurately see every fine detail, even when displayed on a large screen.

"The UNITE PTZ Camera's versatility with USB 3.0 and DVI interface and plug-and-play simplicity makes it unique in its class," said Bala Krishnamoorthy, Senior Director, Product Line Management for Unified Communications and Media Collaboration at ClearOne. "It is ideally suited for business-grade UC applications and video conferencing, as well as multimedia capture and streaming."

The UNITE PTZ camera works with all of ClearOne's media collaboration solutions. The 1080p60 video combined with wide angle lens provides all participants a super smooth and sharp, life-like video experience. Other salient features include a 12x optical zoom, plus full pan, tilt, and zoom. The fast and stable auto focus ensures that all participants in the room can be clearly seen in the video stream. A choice of standard, soft, or vivid picture modes, and multiple white balance modes, makes it fast and easy for the UNITE Camera to accommodate different users in changing environments.

The ClearOne UNITE Camera's 128 presets allow it to be easily moved from speaker to speaker, or to quickly transition from people to other presentation tools in the room, such as flip charts and whiteboards. Flexible installation options offer multiple perspectives for the user, such as being mounted upside-down directly above a display to maximize eye contact with far-end participants, or from the ceiling to capture content throughout the room.
