ClearOne Demonstrates VoIP Tabletop & Personal Conferencing Products At Spring VON Show

Chat & MAX IP series provide VoIP conferencing flexibility for individuals and businesses

SALT LAKE CITY—March 19, 2007—ClearOne (OTC: CLRO.OB), the global provider of audio conferencing products, today announced the Company will showcase and demonstrate breakthrough audio technologies for VoIP applications, including its IP tabletop solution MAX® IP, and the personal conferencing solutions Chat™ 50 and Chat 150, at the Spring VON show in San Jose from March 19 – 21.

ClearOne will demonstrate the MAX line of tabletop audio conferencing products, which includes the MAX IP, ClearOne's SIP-based VoIP conference phone, and MAXAttach IP, a system that includes two daisy-chained MAX IP phones. Both products deliver ClearOne's trademark crystal-clear audio performance and offer full room coverage with the ability to connect up to four phones at once. These products provide multiple microphones, loudspeakers, and dial pad controls distributed throughout a room.

The Company will also demonstrate its award-winning Chat 50, the personal audio peripheral of choice for travelers. It connects to a wide variety of devices and provides the clearest hands-free audio communications available. Unmatched full-duplex capability gives users the power to simultaneously speak and listen with high-performance two-way audio. The crossover technology in the Chat 50 allows for hands-free communications in new ways that have not previously been possible. It provides high quality audio playback for music, gaming and all audio applications. Slightly larger than a deck of cards, it is truly a one-of-a-kind, go-anywhere personal device for conferencing and more.

The Chat 150 is the newest addition to the Chat line. A speakerphone made for small group or individual use, it easily attaches to enterprise phone handsets, so users can experience high-quality, full-duplex conference phone performance while retaining the rich management features of a handset, such as access to the company phone directory, call forwarding, and audio bridge dialing. The Chat 150 also connects to PCs and video conferencing systems for the rich audio communications performance that is expected from ClearOne.

"VoIP has enabled significant new functionality in telecommunications," explained Kurt Olsen, ClearOne's director of product marketing. "Companies of all sizes are deploying VoIP systems into their businesses to take advantage of these new feature sets. ClearOne's MAX IP and Chat series of conferencing products enhance a company's investment in VoIP, and deliver crystal-clear hands-free audio in a wide variety of situations to greatly enhance collaboration between groups and individuals."
