## **ClearOne Showcases Two New Members of the Converge(TM) Pro Family at InfoComm08**

### **ClearOne to feature demonstrations of Converge Pro 880T and Converge SR 1212 at booth C-3739**

SALT LAKE CITY, June 12 /PRNewswire-FirstCall/ -- ClearOne (<http://www.clearone.com>) (Nasdaq: CLRO), the leading global provider of high performance audio conferencing solutions, will showcase its new Converge Pro 880T and Converge SR 1212 at the InfoComm08 exhibition and technology conference Wednesday, June 18 through Friday, June 20 in Las Vegas, Nevada.

InfoComm is the leading business-to-business marketplace for display, projection, audio, conferencing, lighting and staging, digital signage, Internet streaming, and networked presentation and communications systems. ClearOne will exhibit its entire line of industry-leading audio conferencing systems in booth C-3739 of the Las Vegas Convention Center and will highlight the two newest members of the company's flagship Converge Pro platform of professional audio solutions.

ClearOne's new Converge Pro 880T is a complete, standalone audio conferencing system that boasts a built-in telephone interface and power amplifier along with ClearOne's Distributed Echo Cancellation®. The 880T may be linked with any of the other Converge Pro products to create larger systems that accommodate a greater number of conferencing participants.

All of the products in the Converge Pro line feature HDConference™ technology with ultra-wide bandwidth acoustic echo cancellation.

"The Converge Pro 880T embodies the newest technologies requested by the audiovisual industry within a comprehensive audio package of proven features," said Scott Woolley, Director of Product Marketing - Professional Audio at ClearOne. "These features combine to deliver the best-sounding audio conferencing experience possible. The addition of the 880T to the Converge Pro product line gives our customers increased options and flexibility in the selection and configuration of their conferencing systems which significantly optimizes the value of their systems."

ClearOne is also highlighting the new Converge SR 1212, a digital audio processor and matrix mixer developed specifically for the professional audio market. The Converge SR 1212 incorporates new features and proprietary audio processing technologies that automatically adapt to a room's acoustical environment. "Adding simplified configuration tools and enhanced management features to its ability to link multiple Converge SR 1212s together make it a perfect choice for virtually any venue," Woolley added.

Features of the Converge SR 1212 include:

- Advanced audio Digital Signal Processing (DSP)
- Intelligent adaptive automatic microphone mixing
- Matrix mixing
- Automated system diagnostics
- Ethernet control and configuration
- Links to other Converge Pro products via a low-latency audio network

"The SR 1212 can be quickly configured to interface with other audio devices by simply dragging-and-dropping settings from the configuration database," said Woolley. "This enables professional audio systems integrators to optimize audio performance faster than was previously possible."

About ClearOne
